Why is solar energy important?

Solar energy creates free, renewable power from the sun. It's abundant and produces no carbon emissions or local air pollution. Still, about 60% of the electricity that power plants generate in the U.S. comes from fossil fuels like coal and natural gas, which we know contribute to issues related to global warming and climate change.

Could solar energy save money?

It could also drive down costs. Already, solar panels themselves account for less than half the cost of large solar farms and a tiny fraction of the cost of small rooftop projects,<sup>7</sup> so lightweight technologies that save on labor, transportation, and land use costs could make solar energy even cheaper and more accessible.
